

Sudheesh Sreenilayam

Senior Operations Analyst & Data Strategist

Specializing in Supply Chain Optimization, Predictive Modeling, & Dashboard Engineering

Chicago, Illinois, United States, +1 (312) 868-9096, sudhisreenilayam13@outlook.com, [LinkedIn](#), [GitHub](#)

Summary

Data-Driven Operations Analyst with 8+ years of experience optimizing global logistics and support workflows for Fortune 1 clients. Expert in utilizing **statistical analysis** and **predictive modeling** to identify inefficiencies, delivering proven cost reductions of **~\$900k annually**. Leveraging M.S. in Business Analytics to engineer scalable reporting solutions (**SQL, Tableau, Power BI**) and automate complex decision-making processes.

Skills

Data Analysis: SQL (Joins, Aggregations), Python (Pandas, NumPy, Scikit-learn), R, Advanced Excel (VBA/Macros), Minitab.

Visualization: Tableau (Dashboards & Stories), Power BI (DAX), Google Looker Studio

Methodologies: A/B Testing, Time-Series Forecasting, Regression Analysis, Root Cause Analysis, Lean Six Sigma (Green Belt)

Professional Experience

Sutherland Global Services | *Strategic Partner to Fortune 1 Global E-Commerce & Logistics Client* | 2016 – 2024

Rapidly promoted 4 times in 8 years, progressing from Entry-Level Associate to Senior Manager overseeing 200+ FTEs and leading strategic, data-driven operational improvements.

Senior Associate Manager – Operations Analytics Lead | Sep 2023 – Aug 2024

- **Predictive Modeling & Cost Strategy:** Conducted quantitative analysis on 500k+ monthly support tickets to model defect trends. Identified a 66% non-critical volume rate and designed a "Self-Service" workflow projected to reduce annual operational costs by **~\$900k**.
- **Dashboard Engineering:** Designed and deployed automated Power BI dashboards to track real-time SLA performance, reducing manual reporting latency by **40%** and enabling intra-day resource reallocation.
- **Workforce Analytics:** Developed a capacity planning model using historical volume regression to forecast staffing needs for 200+ FTEs, improving schedule accuracy and mitigating overtime variance.

Associate Manager – Operations & Process Improvement | Dec 2021 – Aug 2023

- **Statistical Process Control:** Utilized Minitab to perform hypothesis testing on service bottlenecks, identifying process variations that led to a **2.7% improvement** in operational throughput.
- **Optimization Logic:** Engineered a staffing allocation algorithm in Excel to balance shift coverage against predicted demand, directly reducing team overtime spend by **15%**.
- **Dashboard Deployment:** Partnered with the BI team to launch real-time performance trackers, enabling frontline managers to drive a **7% increase** in successful delivery resolution.

Lead, Service Delivery Management | Dec 2019 – Nov 2021

- **Service Design:** Conducted **A/B testing** on service scripts, leading to a **16% improvement** in First Call Resolution (FCR).
- **Performance Strategy:** Automated manual reporting workflows, saving **5+ hours** of leadership time weekly.

Early Career (Promoted from Associate to Senior Subject Matter Expert) | Jun 2016 – Nov 2019

- Rapidly promoted through the ranks (Associate -> SME -> Lead) based on top-tier performance, including "**Best Performer**" awards for 6 consecutive months.
 - Led a pilot team of 20 representatives, implementing a data-driven feedback model that increased team efficiency by **2.4%**.
-

Education

Roosevelt University, Chicago, Illinois | **Master of Science in Business Analytics** | Expected Completion by May 2026

- GPA – 4.0/4.0

School Of Engineering, CUSAT, India | Bachelor of Technology in Electronics & Communication Engineering

Academic & Personal Projects

Superstore Profitability Analysis (Python, Regression & Clustering)

- **Advanced Analytics:** Performed **K-Means Clustering** in Python to identify a "Bleeder" segment of 302 customers generating negative value (-\$81/avg) and **Regression Analysis** to statistically validate price discounting as the primary churn driver.
- **Financial Modeling:** Engineered a "What-If" simulation model in Excel and Power BI to quantify the impact of variable shipping rates, identifying a **4% margin leak** in expedited shipping.

Fake Job Posting Detection (Python & Machine Learning)

- **End-to-End Development:** Managed the full development lifecycle of a fraud detection pipeline, addressing a critical online security risk.
 - **Technical Execution:** Oversaw data ingestion (Web Scraping via **BeautifulSoup**), feature engineering (NLP/TF-IDF), and model validation, achieving an **F1-Score of 0.84** with Support Vector Machines.
-

Certification:

- **Lean Six Sigma Green Belt**
- **Google Data Analytics Certificate** (in progress)
